

Warehouse Management System Overview

Lile International currently provides real-time inventory management using an in-house system tailored specifically to asset management and the needs of our commercial storage and distribution customers.

Complete real-time inventory visibility is provided via secure Lile's Inventory Management System. In addition to providing access to inventory levels and status 24 hours a day, location transfers and outbound shipments can be accessed remotely at our customer's convenience.

Featuring fully integrated warehouse, transportation and order management systems, this solution offers Lile's commercial customers a host of services and supply chain integration opportunities.

Some of the benefits for our customers include:

Inventory Control

- Greatly increased accuracy of inventory levels
- More rapid notifications of receipts and shipments
- Improved reporting capabilities
- Advanced EDI and other integration capabilities
- Greater supply chain visibility

Receiving

- Immediate receipt of goods into system
- Immediate notification on receipt available via email
- Improved notation of OSD (Over, Short or Damaged) materials
- Receipt documentation available via web immediately after scanning and always available

Notifications

- Immediate notifications of shipments or receipts, directly from the warehouse floor
- Automatic email notifications can be sent to multiple email addresses
- Can receive notification for shipments or receipts
- When used in conjunction with web-based portal access, eliminates the need for faxed or unnecessary emailed documentation

Portal

- Real-time inventory levels available at all times
- Complete history of receipts and shipments
- All shipment and receipt paperwork scanned and available for viewing immediately after processing
- Custom Inventory management reports
- Microsoft Excel compatibility

Sophisticated EDI and web service interfaces provide a robust backend for communication between Lile, our customers and their suppliers, while bar-coding, RFID capabilities, and advanced labor tracking capabilities will work together to provide your company with even greater flexibility and the utmost in service.
