

Lile International's DaVinci Supply Chain Management Suite offers a wide range of pre-built reports designed to address your most sophisticated inventory and transportation management reporting needs. In addition to over 100 pre-built reports, the DaVinci system utilizes Business Object's Crystal Reports reporting solution to allow for the utmost flexibility in the creation of custom reports. In conjunction with the system's Microsoft SQL Server database backend, the DaVinci Supply Chain Management suite ensures that Lile's customers always have the data visibility they need.

In addition to DaVinci's stock Crystal Reports-based reporting, our web-based customer portal provides on demand access to many of our most popular reports, giving our customers instant visibility to their inventory stored at all Lile facilities.

Some of our most popular reports include:

Item Summary

The Item Summary report presents a detailed overview of all SKU's in stock including unit of measure details, case and pallet pack quantities, as well as weight and dimensional information.

Inventory Summary

The Inventory Summary report allows Lile's customers to view a snapshot of all physical inventory stored across Lile facilities as of a certain point in time. Discrete inventory levels are provided for each possible item status, including Available to Promise, Allocated, On Hold, Quarantined, and Damaged, and summary totals are provided both by weight and inventory quantity. If lot tracking is utilized, independent counts and summary totals are provided for individual lot numbers.

Inventory Activity

The Inventory Activity reports depicts a detailed view of inventory activity for individual stocking units throughout a range of dates, displaying starting quantities, all shipping, receipt, and adjustment activities, and ending quantities within a specified date range. Again, if lot tracking is utilized, independent counts and summary totals are provided for individual lot numbers.

Inventory Aging / Kit Inventory Aging

The Inventory and Kit Inventory Aging reports allow for the rapid identification of stocking units that have been stored for excessive periods of time, providing valuable insight into inventory turn.

Order Summary - Receiving/Shipping

DaVinci's Order Summary reports provide a summary view of all shipments and receipts occurring over a particular date range. When viewed using our web-based portal, these reports also allow for drill-down to individual orders, and allow for immediate access to small-parcel tracking and scanned online document access.
